

HOMEWORK-2

The virus named SARS-CoV-2 (formerly 2019-nCoV) is an RNA virus and belongs to the coronavirus (Coronaviridae) family. The virus causes an infectious disease in humans called Coronavirus Disease 2019 (COVID-19). Virus very similar to SARS-CoV, which caused the Severe Acute Respiratory Syndrome (SARS) epidemic between 2002 and 2004. COVID-19 is a global epidemic as of 2020. [1]

Figure 1: Coronavirus

Every country strives to defeat this virus and mobilizes health services. Case numbers and deaths are reported regularly. By analyzing these data, the course of this process is determined. Data is taken from ourworldindata.org site.
